PRINCIPLE OF OPERATION

The IZAR RADIO EXTERN PULSE consists of an electronic unit, which receives and saves meter information in the form of pulses. The radio module sends the meter number, meter reading and various items of operating information every 8 sec. The data can be received by a mobile or static receiver.

Mobile: The IZAR POCKET pocket PC collects the data in walk-by or drive-by mode in conjunction with the HYDROMETER BLUETOOTH RECEIVER. The data for the reading route is sent directly to the central PC.

Static: A HYDROMETER receiver (M-Bus, LAN, WLAN, GPRS) collects and saves the data and transfers it cyclically to a control centre (e.g. IZAR CENTER, Web server).
